

Ultra-Thin Client

Your Flat Screen...

...as a Thin-Client Terminal

AX3000

Model 70W

*'Micro' Terminal
for Windows*

- Embedded RDP and ICA Clients
- No Operating System
- Ultra-Thin Client technology
- Printer and peripheral support
- Remote administration
- VESA mounting kit included

Ultra-Thin Client

Optimised electronics

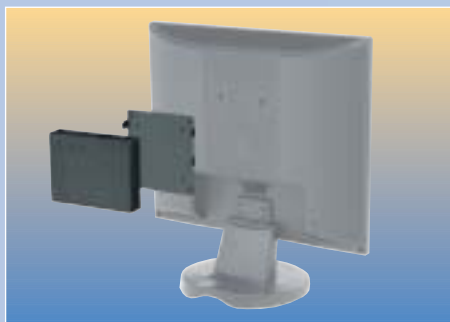

No operating system

Zero local administration

Native clients for ICA / RDP

Multiple independent sessions

AXEL is unique among terminal manufacturers in that all aspects of the product, (hardware, firmware, emulations and connection protocols) are developed in our own research and development laboratories. This investment in thin-client knowledge is unique in the industry and enables Axel to take a holistic approach in support and development. We are not constrained by the integration of any third party product or licenses. All manufacturing takes place within Europe, enabling excellent quality control.

AX3000 Model 70W

● **Ultra-Thin Client Technology**

Innovative technology allows the connection protocol (Citrix ICA, Windows Terminal Services RDP) to use all the terminal's hardware resources, ie there is no operating system competing for the hardware. This approach capitalises on the true advantages of thin-client computing and is radically different from terminals based on 'PC technology'. This freedom from the constraints of 'PC technology' is the essence of Ultra-Thin Client technology.

- High graphics performance
- Robust design
- Total virus immunity
- Zero local administration

● **Remote Administration**

The complimentary remote management software provides powerful and intuitive remote administration of terminals.

- Automatic configuration download for remote terminals, ie no end-user interaction
- Supports an unlimited number of terminals
- Automatic scanning and inventory of terminals over the network
- Easy visualisation and organisation of terminals within a directory structure
- Standalone software runs on non dedicated PC
- All terminals' configurations are archived
- Single click to update firmware or configuration on single or group of terminals
- Remote access to terminal's setup
- Contactless remote automatic configuration

● **Unrivalled Support**

AXEL develop the entire product from the base-up. As such we are able to develop each component, whether hardware, firmware or software for its exact required function.

This also means we have in-house expertise on every facet of the product enabling us to offer unparalleled technical support.
